

FLENS Firmware Security Report

Risk Score: LOW

Inventory Coverage and Scan Diagnostics

Components: 212 merged from 237 raw discoveries.

Version coverage: 49% · CPE coverage: 1%

ELF: 719 examined; 99 executables; 34 libraries.

Extraction placeholders: 0 · Open/read failures: 0 · Unreadable files: 0.

Coverage warning: Low version or CPE coverage reduces assessment confidence. No CVEs found does not necessarily mean the firmware is vulnerability-free.

BusyBox applets recognised: 0

Identity Resolution

Resolved 3 · Excluded 31 · Ambiguous 1 · Unsupported 2 · Insufficient evidence 175

Governed CPE components: 3 (1%) · Legacy fallback: 0 · No CPE: 209

Ambiguous identities require manual review.

Unsupported identities are outside the current resolver policy.

Insufficient evidence prevents safe canonical mapping.

Low governed-CPE coverage limits vulnerability-assessment confidence.

Observed	Canonical	Status / Rule	CPE source	Evidence

Vulnerabilities

No matching CVEs found.

Risk Score Breakdown

Critical Vulnerabilities: 0

High Vulnerabilities: 0

Medium Vulnerabilities: 0

Low Vulnerabilities: 0

Calculated Score: 0

Overall Risk: LOW

Vulnerability Detection Explanation

FLENS identifies vulnerabilities through:

1. Component detection
2. Version identification
3. Vulnerability database correlation

FLENS detects known vulnerabilities based on available vulnerability intelligence.

Absence of findings does not imply absence of vulnerabilities.

Transparency & Methodology

- Risk scoring methodology: docs/risk_scoring.md
- Vulnerability detection methodology: docs/vulnerability_detection.md
- SBOM methodology: docs/sbom.md

Disclaimer

FLENS identifies known vulnerabilities and security indicators based on detected software components and available vulnerability intelligence.

The absence of findings does not imply the absence of vulnerabilities.

New, undisclosed, proprietary, or currently unknown vulnerabilities may not be detected.
